

Review of All Unbuilt Master Plan Rights-of-Way

The review of all unbuilt master plan rights-of-way includes all roadway classifications that have not yet been built or expanded to the ultimate master plan right-of-way width and cross section. This effort involved reviewing existing content in Table 4 of the 2009 MPOT, providing greater detail on all existing roadways, where available, and inclusion of additional information and details gathered from subsequent area master and sector plans. Using GIS and available aerial mapping, the team determined the existing condition of these roadways (right-of-way widths along critical segments, number of lanes built, key locations such as intersections and pinch points, and identification of changes in development (urban, suburban, and rural)).

Data Collection and Existing Resources

M-NCPPC provided a comprehensive list of active master and sector plans in Prince George's County to be reviewed. A total of 63 plans were provided dating as far back as 1989 and separated into two categories: pre-MPOT 2009 and post-MPOT 2009. This list provided simplified plan names, plan types, plan years, and additional notes for each item as needed. All of the documents were accessed through links provided to the Prince George's County Planning Department website.

Additional Prince George's County documents were sourced and reviewed outside of the list provided by M-NCPPC. Prince George's County's Plan 2035, 2021-2026 Capital Improvement Program, and BRT Feasibility Study Report were all reviewed, in addition to a handful of standards created by DPW&T. These documents were all downloaded from appropriate County agency websites .

Findings

Table 4 of MPOT 2009 provides a list of roadway facilities with corresponding identification numbers, as well as project limits, proposed right-of-way widths, proposed number of lanes, and the name of the master/sector plan document from which this information was sourced. Reviewing these documents and pulling relevant information was an iterative process intended to make Table 4 and the GIS layers as clear and descriptive as possible. Table 4 as provided in MPOT 2009 and the Updated Table 4 can be found in **Attachment A** and **Attachment B**, respectively. The GIS layer can be found in **Attachment C**.

After reviewing a portion of the plans provided by M-NCPPC, it became clear that a large amount of relevant information would need to be added to Table 4. This finding further shifted the focus away from making new evaluations and toward making sure all relevant information was included.

All new information was divided into one of three categories: new facilities, new information added to an existing facility, and new information conflicting with an existing facility.

New Facilities

A total of 111 facilities were added to Updated Table 4. These facilities appeared for the first time in master and sector plans newer than MPOT 2009. Most new entries fall under the categories of Primary Roads and Urban Center Streets. However, some new Arterial, Major Collector, and Collector roads were found. Table 4 as provided in MPOT 2009 did not include any Secondary

Roads or Urban Center Streets, meaning these categories are entirely composed of new facilities. All new facilities are shown with blue highlights in Updated Table 4.

The data in Updated Table 4 is strictly a compilation of recommendations; the status of these projects has not been explored. These entries should be further explored using the companion GIS map to evaluate build status, where applicable. It was not possible to add some details to the GIS map for new facilities where not enough detail was provided to correctly plot them .

New Information Added to Existing Facilities

Table 4 as provided in MPOT 2009 contains several facilities where right-of-way widths and lane numbers are presented as a range of values. Where applicable, data from the additional sector and master plans were added to eliminate and further refine these ranges within tighter limits. These facilities maintain the same Road ID/Facility Name and are presented as new items in Updated Table 4. These new entries are shown with purple highlights in Updated Table 4. **Table 1** and **Table 2** below show an example of this scenario using new information found for A-61 (Crain Highway).

Table 1
A-61 in Table 4 as Provided in MPOT 2009

Road ID	Facility Name	Route ID	Project Limits	Right of Way (Feet)	Lanes	Most Recent Master Plan Citation(s) & Year of Approval
A-61	Crain Highway	US 301	Old Crain Highway to Collington Road	Varies	4 to 6	Subregion 6-2009

Table 2
A-61 in Updated Table 4

Road ID	Facility Name	Route ID	Project Limits	Right of Way (Feet)	Lanes	Most Recent Master Plan Citation(s) & Year of Approval
A-61	Crain Highway	US 301	Old Crain Highway to Central Avenue	Varies	4 to 6	Subregion 6-2009
A-61	Crain Highway	US 301	Central Avenue to Mount Oak Road	120	4	2022 Bowie-Mitchellville and Vicinity
A-61	Crain Highway	US 301	Mount Oak Road to Collington Road	Varies	4 to 6	Subregion 6-2009

Table 4 as provided in MPOT 2009 presented A-61 as one line item with Project Limits stretching from Old Crain Highway to Collington Road. With information sourced from the 2022 Bowie-Mitchellville and Vicinity plan, this listing was refined to eliminate the uncertainty about right-of-way width and lane numbers for a segment of this facility.

A total of 30 facilities were further refined using this method (some multiple times using several documents). These refinements were most prevalent along larger segments, typically Arterial and Collector roads.

New Information Conflicting with an Existing Facility

Several conflicts were identified between Table 4 as provided in MPOT 2009 and the new data sourced from the master and sector plans. These conflicts are shown with red highlights and are

given a footnote number that links the two items and provides further explanation in Updated Table 4. A total of eight conflicts were identified, with most of them being an issue of Road ID appearing differently between planning documents. Other conflicts include right-of-way and/or lane width values appearing differently across documents for the same facility.

There is one unique conflict pertaining to F-3/F-12 (Intercounty Connector). Table 4 as provided in MPOT 2009 contained a note saying to “delete east of current MDOT ICC project limits.” Upon further investigation, this note is referencing an offshoot of the ICC in the form of a new County road identified as A-44. A-44 has since been removed from master planning efforts because of its environmental impacts, and any Intercounty Connector recommendations will no longer include this.

Updated Table 4 and GIS map

Updated Table 4 reflects all roadway recommendations obtained through active Prince George’s County master planning documents. This includes information provided from the County, from the 2009 MPOT, and from the list of additional master and sector plans provided by Staff. Updated Table 4 is meant to be a summary of these recommendations and does not provide any final recommendations or reevaluations.

The GIS map contains geometric shapes representing the items listed in Updated Table 4. Each shape represents an independent segment associated with one line item. These shapes are bounded by the existing right-of-way and do not represent the recommended right-of-way widths listed in Updated Table 4. When selected, each shape will show a dialog box noting the recommended right-of-way width and other relevant data from Updated Table 4. The recommended right-of-way widths do not currently account for pinch points where sensitive obstacles and protected properties need to be avoided. In these situations, the roadway centerline may need to be adjusted and impacts to other properties evaluated.

The objective of this GIS map is to compare the data in Updated Table 4 with existing conditions to evaluate the major differences and compounding effects. Projects listed in Updated Table 4 may appear in GIS as overlapping segments or in conflict with recent developments. As some facilities in MPOT 2009 were first recommended as far back as 1989, these facilities may have already been built or reconstructed per recommendations newer than MPOT 2009.

Updated Table 4 and its companion GIS map identify the recommended roadway projects and improvements currently active throughout Prince George’s County. These are intended to be reviewed further to inform the final roadway recommendations for MPOT 2035 in later tasks.

Key	
■	New facility
■	New information added to existing facility
■	New information conflicting with existing facility

Notes:

- 1 Intercounty Connector is listed as two unique Road IDs. Some recommendations also include limits of a since-abandoned recommended facility (A-44).
- 3 Muirkirk Road is listed as two unique Road IDs with the same information.
- 4 Montpelier Drive is listed as two unique Road IDs with the same information.
- 5 Briggs Chaney Road is listed as two unique Road IDs with the same information.
- 6 Calverton Boulevard is listed as two unique Road IDs with the same information.
- 7 Laurel Bowie Road has conflicting limits across these two Road IDs.
- 8 Rollins Avenue/Suffolk Avenue is listed as two unique Road IDs with the same information.
- 9 There is no road called Main Street. Assumed that this is referring to Old Central Avenue.
