

Medical Innovation Campus Public Work Session

Analysis, Summary, and Findings

The Maryland-National Park and Planning Commission Prince George's County Planning Department

March 14, 2025

Medical Innovation Campus Public Work Session

Analysis, Summary, and Findings

Process

The Medical Innovation Campus Public Work Session took place on November 20, 2024, at the Southern Area Aquatics and Recreation Complex in Brandywine, MD. Based on Councilmanic District 9 Office, the estimated attendance of the entire meeting is 350. The public work session comprised two events. The first focused on Prince George's County Council District 9 and planning Subregions 5 and 6, and the second focused on the area surrounding the Southern Maryland Medical Center and a Medical Innovation Campus opportunity.

Subregions 5 and 6 in District 9

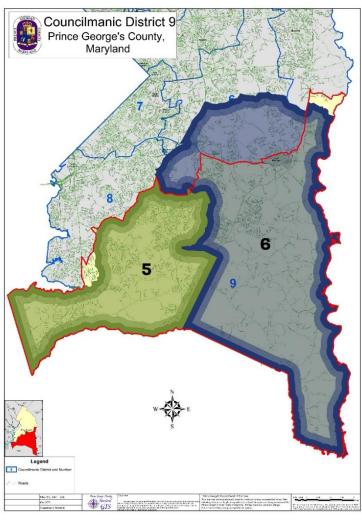

Figure 1 – Map of Council District 9 and Planning Subregions 5 and 6

Subregion 5 covers approximately 74 square miles in south and southwest Prince George's County, representing approximately 15 percent of the County's total land area. Communities in Subregion 5 include Accokeek, Brandywine, and Clinton/Tippett.

Subregion 6 is in the southeast portion of Prince George's County and is approximately 151 square miles, or 31 percent, of the land area of the county. Communities in Subregion 6 include Upper Marlboro, Eagle Harbor, Aquasco, Baden, Brock Hall, Croom, Marlboro Meadows, Marlton, Melwood, Perrywood, Rosaryville, and Villages of Marlborough.

Strengths

The strengths listed in the chart and table below are based on written responses submitted by attendees during the community meeting and were grouped into four main categories: Safety; Access/Transportation; Land Use; and Affordability.

Respondents viewed Access/Transportation and Land Use (both at 23% of responses) as the two strengths of the combined subregions. Most respondents enjoy the rural nature of the area as well as the access to Washington, DC, and other places in the Washington metropolitan area.

However, 42% of respondents saw other, wide-ranging strengths, especially the subregions' diversity, as well as proximity to schools and community centers.

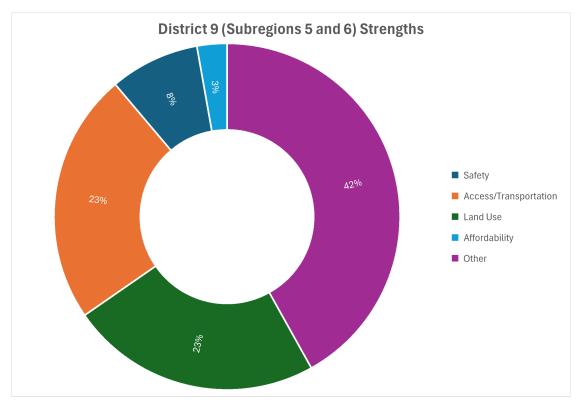

Figure 2 - Strengths: Distribution of Comments

Figure 3 - Strengths: Categorization of Comments

Weaknesses

The weaknesses listed in the chart and table below are based on written responses submitted by attendees during the community meeting and were grouped into four main categories: Lack of Transit Access; Lack of Retail/Entertainment; Overdevelopment; and Infrastructure.

While respondents were generally positive about living in the subregions, it is noted that respondents (27% of responses) cite a lack of retail/entertainment options. Most responses point to a lack of healthy food options and that the area either lacks entertainment options or there are questions about the quality of the entertainment options that are present. There were a number of responses about the lack of grocery stores and the area being a food desert.

Although respondents enjoy access to Washington, DC, and other locales, 23% of responses point to infrastructure as a weakness. There were many citations of traffic as a problem, as well as poorly maintained roads.

Other (38%) of responses were wide-ranging, but it is interesting to point out that, where some respondents saw either schools or proximity to schools as strengths, other respondents saw schools or a lack of schools as weaknesses. Weaknesses also stated included a lack of law enforcement or not enough police patrolling the area to cut down on crime.

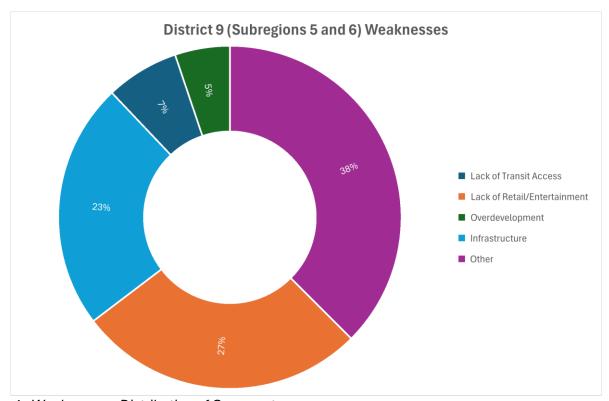

Figure 4 - Weaknesses: Distribution of Comments

Lack of Transit	Lack of	Overdevelopment	Infrastructure	Other
Access	Retail/Entertainment	-		
Insufficient public transit	Lack of healthy food options	Too much housing development	Lack of green corridors/ parks and other spaces	High housing and land costs
Misuse of kiss & ride	Lack of third spaces	Building too many houses	Design well-lit streets, crosswalks and sidewalks to ensure pedestrian safety	Air quality
Public	Retail options	Overdevelopment	Traffic	Toxic Industries
transportation				
Transit	Fine Dining	Not so many condos	More bike, walker paths	Lack of schools
Transportation	Lack of healthy food options	Overdevelopment	Traffic	Lack of medical options
Traffic is terrible	Lack of entertainment	Development is out of control	Traffic	Lack of beautification
Walkable areas	Quality of entertainment	Single family homes	Transportation	Lack of schools
Walkable neighborhoods	Lack of healthy food options	Too much land that is zoned low density residential	Traffic/narrow roads	Affordable housing
Public transportation	Restaurants	Impending additional housing	Roads in poor repair	Hospital care
Public transportation	Healthy food stores	Becoming overgrown with development	Infrastructure	Rec facilities far apart
Public transportation	Hotels	Too many constructions around 20613	Improve trash clean up around RT5 and Woodyard Rad	Crime
Reliable transit options	Restaurants	Too much development	Infrastructure - water, sewer lines, poor state of roads	Youth activities
Transportation	grocery stores		Traffic	Crime
Lack of public transportation	Retail options		Infrastructure	Lack of youth

Better access to public	Restaurants	Better roads	Air quality

Figure 5 - Weaknesses: Categorization of Comments

Opportunities

The opportunities listed in the chart and table below are based on written responses submitted by attendees during the community meeting and were grouped into four main categories: Land Use; Traffic Flow; Parks/Recreation and Activities; and Retail.

Whereas some respondents saw a lack of retail as a weakness, other respondents saw an opportunity in retail (23% of respondents). Many of the responses reflect a desire to see not just more retail, but better, updated, and higher quality retail options, including farmers markets and opportunities for families to enjoy entertainment together.

Also, where land use was seen as a strength, it is also seen as an opportunity. 20% of responses discussed land use opportunities including moving more towards agricultural tourism and providing more access to land for more farms. However, there is also a noticeable group of responses that advocate for mixed-use options.

Of the Other responses (37%), there seems to be a desire to have more jobs and activities for youth, as well as there to be more opportunities for youth and seniors to interface and connect with each other.

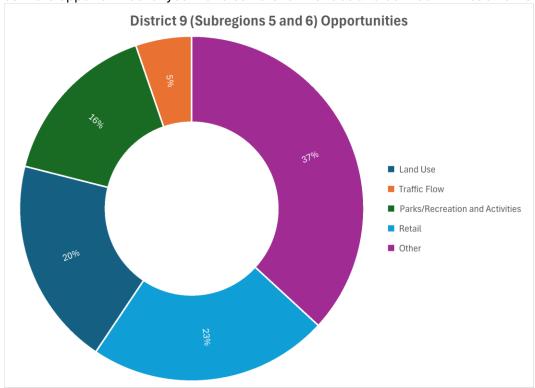

Figure 6 - Opportunities: Distribution of Comments

Land Use	Traffic Flow	Parks/Recreation and Activities	Retail	Other
Land access for farmers	Multimodal transportation	Connect trails and bike paths	Better retail	Resources for locally grown and sourced food
Agricultural Tourism	Better traffic flow	More trails and bike ability, walkability	Farmers markets	Connect farmers with local community neighborhoods
Set limits on urban sprawl	Better traffic flow	Outdoor parks	Family opportunities for entertainment	Better education
Agricultural Tourism	More public transportation/train	Updated parks and rec	Updated retail	Public art
Space for farming	Rapid transportation system	More fitness centers	Family entertainment	Historic Preservation
Shared housing	Traffic flow	Updated parks + rec	Farm to table restaurants	history and museums
Auxiliary housing	Improving roadways and traffic	Recreational Activities	Healthy food options	Job opportunities
Stop building houses		Parks for walking, biking	Fine dining	Senior housing
Mixed use		Greenery	Luxury hotel	Seniors and youth working together
Slow down residential development until infrastructure in place to support		Parks and rec	More retail space for more jobs	Seniors and youth working together
Develop 301 for commercial/industrial development		Sustainable life styles	Improved food quality options	More medical
Land to expand available		More parks, trees, conservation of trees, forests, rivers, waterways	Attract a Mom's, Sprots or other organic foods	Brewery opportunities for farmers
Land for expanding		Stop clearing woods, trees to build mass housing	Retail spaces/malls	Creation of real life situations and opportunities for the youth
Small scale housing		Walking trails	Fresh food- access	Family entertainment

Mixed use	Preserve trees	High quality dining	Family activities
Opportunity for various types of housing	More opportunities for teens + young adults for safe recreation	Organic grocery store	Senior + youth connection programs
Keep farm land	More adult classes	Increase commercial tax base	Need more youth activity
Better planning decisions that reflect what residents want, not the developers	SAARC needs more classes	More retail	Better communication with law enforcement
Rezonings that make sense	More classes	Better eateries	Better hospitals
Less housing	Network of trails between parks along river & Cedarville	Better retail	Number of additional doctor and medical facilities
Space that other areas do not have to grow	Sporting facilities	Costco	Ag center
Exponential growth		Banks	Better schools
Agricultural Tourism		Better places on the high end to eat and have fun time with family/friends	Safer neighborhoods
Urban/rural farming development areas		Trader joes	Heritage tourism
Suburban		Home builders develop master plan with commercial businesses	Code enforcement
Agricultural Tourism		More attractions & activates people want to visit Entertainment	More affordable senior housing Transit
		districts	Halisit

	More farmer	Trees that don't
	markets	drop leaves

Figure 7 - Opportunities: Categorization of Comments

Threats

The threats listed in the chart and table below are based on written responses submitted by attendees during the community meeting and were grouped into four main categories: Traffic, Crime, Overdevelopment, and Taxes.

On the topic of overdevelopment (16% of responses), the main concern is the possibility of too much development, and therefore too many people coming to the area, without more consideration given to stresses on infrastructure and public facilities, including roads and schools. Also, there is concern about new development built on green space/greenfields. Crime (13% of responses) was considered a threat; however, the responses about crime did not concentrate on specific issues concerning crime.

The Other category for Threats (58% of respondents) was the widest ranging category across the entire SWOT analysis for Subregions 5 and 6. Despite this wide range of other threats, the most plentiful "other" threat was a concern over infrastructure development. Respondents report that there is either a lack of infrastructure like roads and for water systems that are suitable for newer and planned development, or there is inattention to infrastructure altogether.

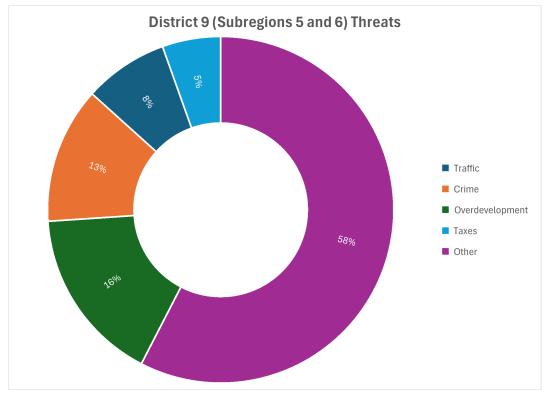

Figure 8 - Threats: Distribution of Comments

Traffic	Crime	Overdevelopment	Taxes	Other
Noise pollution	Crime	Influx of residents to concentrated area	Missing tax base	M-NCPPC approval of threatening development i.e., fast food establishment
Reliance on cars	Crime	Overdevelopment in green spaces	Taxes	Retail in other counties
Traffic	Crime/safety	Overdevelopment	Higher taxes	Entertainment in other counties
Traffic	Crime (high) would negatively	Overdevelopment	Increased residential tax base	PFAs - contamination of farmland from biosolids and more
Poor consideration of traffic patterns related to construction	Crime	Development negative impact on soil and water, woodlands	Inability to increase commercial tax base	Data centers
The roads are not keeping up with growth	Crime	Too many houses without improving infrastructure	Taxes	Landfills
Traffic and speed on 210	Juvenile crime and law enforcement courts	Overcrowding schools due to new home construction	Increasing property taxes for seniors can lead to displacement for our most vulnerable population	Rubble fills
Heavy traffic/jams, trucks, narrow one way Hwy Rt 5 Jams, 301 noises, pollution	Low income housing leading to crime, etc.	Growth has negative impact on road network	Increased taxes to support county initiatives	Fossil fueled power plants
Overly crowded hwys, streets, roads	Gangs/drugs	Traffic due to increase in new home construction	High taxing	Toxic industries
Traffic (210) Traffic congestion to medical facilities,	Crime Judges that are too relaxed on crime	Overcrowding Overdevelopment		DRMO superfund Surrounding communities with better living

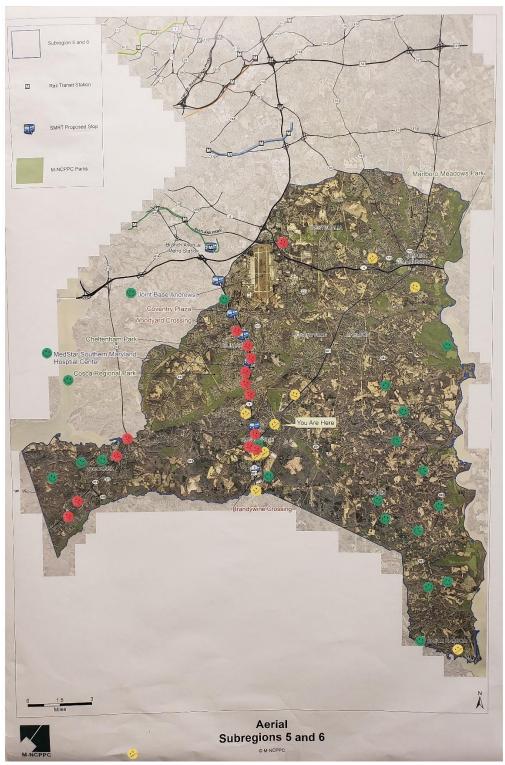

Figure 10 - Composite Map of District 9 / Subregions 5 and 6 SWOT Mapping Exercise

Medical Innovation Campus Study Area

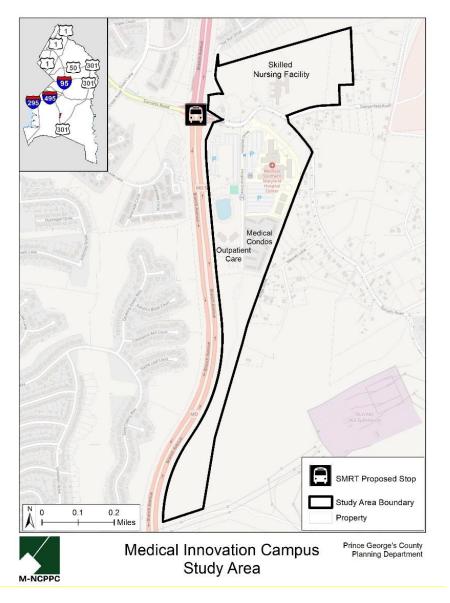

Figure 11 – Medical Innovation Campus Study Area

Presentation

Erik Aulestia, Principal with Torti Gallas and Partners, gave a presentation introducing the attendees to the roles that Hospitals can play as anchor institutions, economic drivers, and development catalysts, as well as the concept of Innovation Districts. Examples of potential amenities, placemaking opportunities, and infill housing typologies were described with precedent images.

Strengths, Weaknesses, Opportunities, and Threats (SWOT)

The second element of the community meeting was a facilitated Strengths, Weaknesses, Opportunities, and Threats (SWOT) assessment for the MedStar Southern Maryland Hospital site and the surrounding area. This included a discussion about a Medical Innovation Campus opportunity. M-NCPPC and consultant team facilitators walked through the tables, answering questions, explaining the process, and offering guidance. Each table was also asked to write their consensus answer for each of the categories on a sticky note and post it to boards at the front of the room. In addition to the written exercise, attendees were also asked to mark Strengths, Weaknesses, Opportunities, Threats on an aerial map with colored dots.

Following the meeting, the submitted feedback sheets were scanned and transcribed along with the sticky note pads and maps. Responses were analyzed and sorted into affinity categories to determine overarching themes and patterns.

Summary and Conclusions

Strengths: The site has two main strengths: its location and land development potential. The location is seen as particularly strong because of proximity to the existing MedStar hospital and easy access to the surrounding area. Despite some traffic-related concerns, its location next to Branch Ave/Route 5 and a future SMRT station contributed to the strength of the location. Half of the respondents highlighted the convenient location near the MedStar hospital as a major advantage. Just slightly fewer people emphasized the availability of land suitable for future development. Particular strengths cited are: available vacant land, the potential for expansion, and surrounding natural resources that can support growth.

Weaknesses: The primary weaknesses found include existing traffic and infrastructure issues and existing limited hospital and medical services. Most comments focused on traffic congestion, inadequate pedestrian and bicycle infrastructure, and limited access points. Concerns were also raised about the need for hospital renovations, limited medical services, long waiting times, and a shortage of skilled medical staff.

Opportunities: Enthusiastic responses pointed to opportunities for more amenities and placemaking, such as new dining options, green spaces, and diverse uses onsite. Healthcare service improvements and working with local food systems were also seen as potential opportunities. Economic development and job creation, along with transportation improvements and expanded housing options, were highlighted as significant possibilities.

Threats: The main threats revolve around traffic and infrastructure pressures from new development, potentially leading to overdevelopment, and negatively affecting quality of life. Concerns about gentrification, unaffordable housing, and various other issues like crime and financing were also noted as potential threats.

Key Takeaways

Based on the responses provided by attendees, several conclusions can be drawn:

Strategic Location and Potential for Growth: The site is strategically located near a major hospital, which is perceived as a significant advantage for development. The availability of land presents opportunities for expansion and growth, making it an asset for future projects.

Need for Infrastructure Improvement: There are significant challenges related to traffic congestion and inadequate infrastructure, including for pedestrians and cyclists. Addressing these issues could enhance accessibility and efficiency, making the site more attractive for development and solving existing traffic issues.

Healthcare and Economic Development Opportunities: There is a strong potential for enhancing healthcare facilities and services, which could include renovations, expanding medical staff, and expanding medical services. Additionally, there are opportunities for economic growth through job creation, new amenities, and placemaking initiatives, which could improve the overall appeal of the site.

Risk of Overdevelopment and Gentrification: The potential for overdevelopment poses a threat, as it could negatively impact the quality of life by increasing traffic and infrastructure strain. Furthermore, gentrification could lead to unaffordable housing and disrupt community dynamics, which must be carefully managed.

Balanced Approach Needed: To maximize benefits while mitigating risks, a balanced approach that addresses infrastructure needs, promotes sustainable development, and considers community concerns is essential for leveraging the strengths and opportunities of the site effectively.

Details on the individual SWOT categories and an illustration of how responses have been categorized are found below.

Strengths, Weakness, Opportunities, and Threats Analysis Strengths

The strengths listed in the chart and table below are based on written responses submitted by attendees during the community meeting and grouped into two main categories: Location and Access; and Land and Development Potential. Among respondents, there was clear agreement (50% of responses) that the location was a strength of the site. Multiple attendees described the site as convenient, a great location, and noted that proximity to the existing MedStar hospital offered advantages for the site. The second major category (representing 45% of responses) commented on the suitability and availability of land for future development. Multiple commenters called out vacant land available, space for expansion, and existing natural resources to support future residents, workers, and visitors to the site.

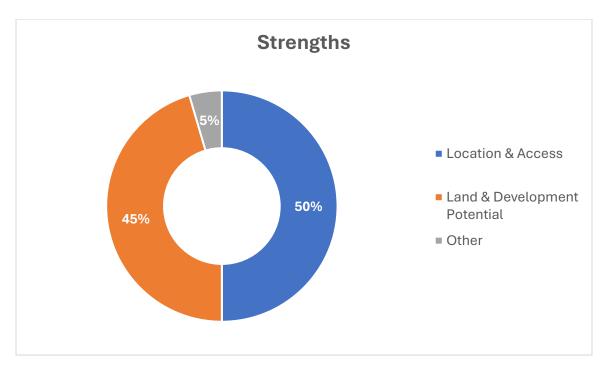

Figure 12 - Strengths: Distribution of Comments

Location & Access	Land & Development Potential	Other
Location	Still has natural resources, opportunities for pocket parks and natural reserve areas	"None"
Great location	Hospital already in place	
Convenient location	Lots of space	
Proximity	Plenty of land for development	
Proximity of hospital	Availability of land to build additional medical facilities, skilled nursing, rehab	
Easy access from local area	Space for expanding jobs	
Ease of access	More rural, open spaces	
Proximity of MedStar	Available space	
Access	Expansion opportunity (north)	
Plenty of parking	Adequate space for development	
Medical attention accessibility		

Figure 13 – Strengths: Categorization of Comments

Weaknesses

The weaknesses listed in the chart and table below are based on written responses submitted by attendees during the community meeting and show an interesting counterpoint to the site's strengths, the top two largest categories of weaknesses involved traffic and infrastructure and the existing hospital and services.

Comments relating to traffic and infrastructure were the clear majority. Respondents specifically mentioned traffic congestion, the intersection of Route 5 and Surratts Rd, lacking pedestrian and bicycle infrastructure, and that the existing traffic pattern only had one way in and one way out of the site.

Comments relating to the existing hospital and medical services were the next largest group of responses. Residents reported limited medical services available and long wait times dissuading people from seeking medical care. MedStar Southern Maryland Hospital completed a renovation and expansion in 2021, but residents expressed the need for more renovations in their responses.

A lack of skilled workers and medical staff was also mentioned as a weakness of the project.

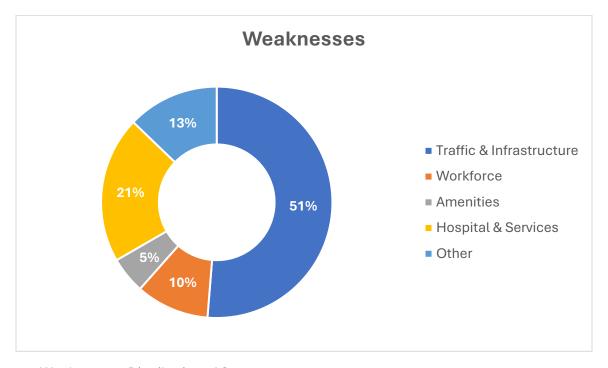

Figure 14 – Weaknesses: Distribution of Comments

Traffic & Infrastructure	Workforce	Lack of Amenities	Existing Hospital and Services	Other
More traffic	Local employee base of non-skilled workers	Day care	Hospital access and wait times	Lack of farm access to land
Traffic congestion	Workforce	Too little recreational facilities for young people	People hesitating to seek medical help because of time involved in being seen	Do what you can with what you have
One way in, one way out	Staffing		Interior facilities	Dead space
Traffic	Not enough medical staff and/or hospitals to serve the residents		Need additional hospitals and medical specialties in closer proximity to population; only 1 hospital at present	Pick up trash
Bad traffic, too much density building			Hospital needs to be renovated with bathrooms in patient	I'm frustrated, I want to see reality
Route 5 and Surratts Rd			Health disparities	
Traffic			Geriatrics medicine for seniors	
Any expansion increases traffic			Limited services at hospital	
"One way in – one way out" is current traffic problem				
Entrance/exit – one way in, one way out

Opportunities

The opportunities listed in the chart and table below are based on written responses submitted by attendees during the community meeting and received the most responses, with many respondents seeming enthusiastic about future possibilities. The largest category of responses, roughly 30%, were related to additional amenities and placemaking opportunities. Residents envisioned new dining and food options, green spaces and gathering spots, community-building opportunities, and a diverse mix of uses on site.

Healthcare and healthy living was one of the second-most common categories of responses (21%). In addition to improvements to the hospital and expansion of on-site outpatient services, there were multiple suggestions for unique opportunities to integrate with surrounding farmland and food systems to provide and promote healthy food-based commerce and education.

Tied as the second-most common category of responses were those related to economic development and job creation. Finally, improvements to transportation, expanded housing options, and "others" were in the third tier of responses, represent 10% of responses each.

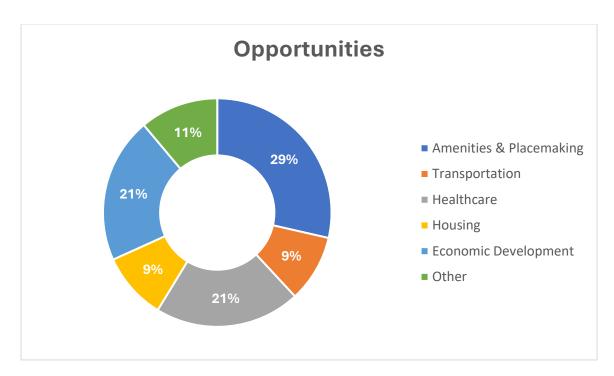

Figure 16 - Opportunities: Distribution of Comments

Amenities & Placemaking	Transportation	Healthcare	Housing	Economic Development	Other
Central dining locations	Overpass onto Surratts Rd	Financial investment into health system sponsored cooking classes to promote healthy diets	Affordable (smaller) and mixed use > yards and single home spaces	Trajectory Changing	Implement existing plans: Brandywine Improvement for Streets and Sidewalks 2020, Revitalization and Preservation Plan 2012
Couty fair	Better roads	"Food is medicine" program with hub at hospital	Multi-generation housing	More upscale building	Please consider seniors and those who will have to live through the change
Better food options	Better transit	Local food aggregator and distribution hub	Assisted living	More career opportunities	Energy innovation
More field sports	Expansion opportunity (don't expand w/out overpass or bypass on Branch Ave)	Medical innovation and research campus	Independent living	More jobs	Renewable energy
Third spaces	Overpass at hospital	Additional medical facilites	Hospital workers training and housing	Jobs	Have workers connect with communities, e.g., rental property; hospitals with local schools
Outdoor areas, community gardens	Infrastructure/ov erpass	Integration of assisted living facilities with medical center and schools for workforce training.	Intergenerationa l	Attract nurses who drive to Montgomery County or DC to work	Love the idea. This would lead to a positive impact in the southern region
Hospital garden – farm to table		Outpatient services close by		The change needed to make PG County a	Creativity

		place of enjoyable living. Preferred place to live.
Health and wellness focused spaces	Urgent care facilites	Better employees
Food hall/Market	Connecting students to the hospital for education opportunity	More employment
Recreation facility on campus	Employ more medical staff to meet the needs of the residents	More diverse tax base
Parks	Improved access to high-tech doctors	Retain and attract younger residents
Green spaces	Increase value of hospital experience for patients and family	More jobs
Diverse businesses and restaurants	Innovation	Employment opportunities in the county
Walkable communities		
Collaborative community buildings spaces		
Community building		
Mixed-use facility

Figure 17 – Opportunities: Categorization of Comments

Threats

The threats listed in the chart and table below are based on written responses submitted by attendees during the community meeting and represents the largest category of comments identified. They identified traffic and infrastructure challenges as threats to the success of the Medical Innovation Campus. Respondents said development would bring new traffic and congestion and would overload existing infrastructure capacity. The planned SMRT station at MD 5 (Branch Ave) and Surratts Rd may alleviate some of these concerns, but residents are still concerned with increased traffic. This may suggest the need for more outreach and communication about existing plans.

The second identifiable category of threats involve specific elements of development. Some residents expressed concerns about over-development, changing the character and quality of life, too much multifamily, and poor planning contributing to the decline of the area. Additionally, others were concerned that new development would contribute to gentrification and unaffordable housing.

A collection of unrelated and distinct threats were also reported by attendees, including things such as crime, litter, bad weather, and lack of financing to pay for development.

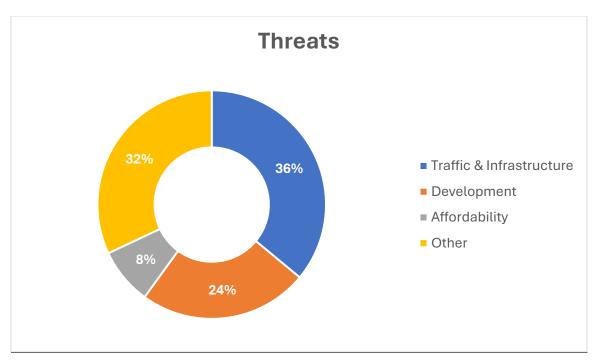

Figure 18 – Threats: Distribution of Comments

Traffic and Infrastructure	Development	Affordability	Other
Increase in motor traffic	Over development	Gentrification/Displacing lower SES (socio-economic status) without easy access	Bringing multiple economic levels together
Too much traffic	Too much density building affect our quality of life	Pricing points for housing (affordable)	Crime
Truck traffic	More development		Trust between old and new
Clogged infrastructure	Apartments		Lack of financing
Traffic congestion	Poor advance planning		Who pays? Transfer of wealth
Infrastructure – proper parking, proper access	Lack of space innovation		Litter
More congestion getting to the area, poor access for drivers			Weather
Why build there when need infrastructure improvements around. Traffic			Poor air quality
Other counties using hospital center increasing traffic (what is the benefit for locals?)

Mapping Strengths, Weakness, Opportunities, and Threats

Each table was given an aerial map delineating the Medical Innovation Campus study area and a collection of green, yellow, and red dots to geographically identify the site's Strengths and Opportunities (green), Weaknesses (yellow), and Threats (red).

Most of the comments were clustered in the northern portion of the site. Multiple people consider the intersection of Branch Ave and Surratts Rd to be a weakness and threat to the success of the project.

The Hospital and its surroundings were another focus area. The entrance to the hospital and the hospital itself were both identified as weaknesses. Hospital Dr was marked as a threat.

One green dot and two red dots are located on the land surrounding Autumn Lake Healthcare – a short-term rehab and long-term skilled-care nursing home. It is difficult to draw specific conclusions from their placement.

Additionally, two dots were placed outside the study area boundary.

A composite map of dots and comments is on the following page.

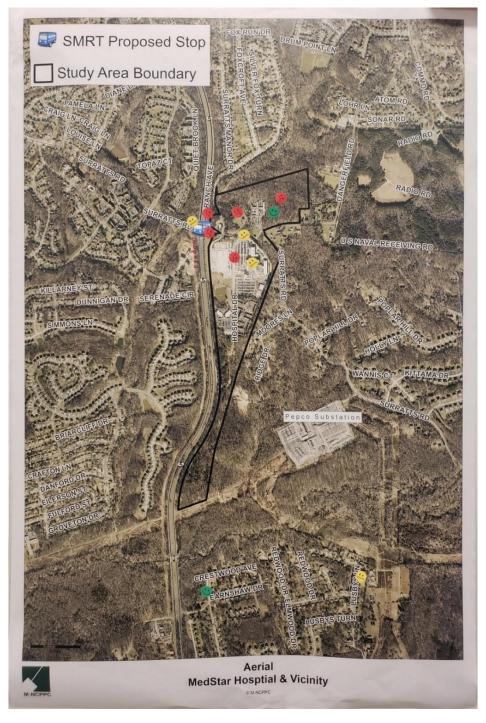

Figure 20 – Composite Map of MedStar Hospital & Vicinity SWOT Mapping Exercise

A Note on Responses and Analysis

Sixty-four attendees submitted worksheets containing their SWOT analyses and comments. Of the 64 submitted worksheets, 3% of the District 9 pages were left blank and 56% of Medical Innovation Campus were left blank.

Best efforts were made to accurately transcribe the notes, but in some cases handwriting and/or respondent intent was difficult to interpret. In a few cases, inferences made by the consultant team was used to discard or reclassify answers that were clearly not a response to the question asked.

Next Steps

The findings from this report will be used to inform the Medical Innovation Campus Feasibility Study to begin in April 2025 with completion in December 2025. The Feasibility study will build off the initial concepts shared during the November 20, 2024, meeting and further developing a vision for an urbanized medical innovation campus where housing, retail, recreation, education, research, healthcare, and healthy living converge. The study when complete will include conceptual representations of the medical innovation campus (maps, buildings, landscaping amenities and circulation patterns), as well as analysis and recommendations.

As the project progresses, a Market Analysis will be conducted, and public engagement activities will take place. Additional interim reports will also be made available. For updates, meeting notices, future reports, and to participate in online surveys please visit frequently the project webpage: https://www.pgplanning.org/projects/medical-innovation-campus-feasibility-study
